

Risks we think are specific to Parachute Games

What are the hazards? What can cause harm?	Who might be harmed and how?	What are you already doing? What are you doing to control hazards and the chance of someone getting hurt?	Do you need to do anything else to control this risk? By following this risk assessment, are the hazards & chances of someone being harmed adequately controlled?
		Generic Activity Risk Assessment	
Impact with the ground from after being suspended on the parachute	Participants	Participants never suspended above the ground on the parachute.	Trivial <i>if controls are followed</i>
Collision with other group members	Participants	Controlled games with limited number going underneath the parachute.	Trivial if controls are followed
